

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2021年6月9日

今日は、日本だけの観測で、Elysium (215W,+30)付近の観測になった。観測条件がよく、B画像もある。それによると、Elysium (215W,+30)台地は白雲に覆われていることが分かる。また、Amazonis (120W~170W,+30~0)やターミネーター側の Ishidis (270W,+23)付近にも広く白雲が広がっている。カラー画像でも注意するとその様子が淡く分かる。南極付近も淡い白雲が姿を見せ始めている。NPCが小さくなってきたため、これは通常の変化である。Eridania (200~230W,-35~-55)付近が赤っぽく写り、この付近は良く晴れているようだ。

2021, Jun. 09

Today, the observation was only in Japan, and it was near Elysium (215W, + 30). The observation conditions are good, and there is also a B image. According to it, it can be seen that the Elysium (215W, + 30) plateau is covered with white clouds. In addition, white clouds are widespread near Amazonis (120W ~ 170W, + 30 ~ 0) and Ishidis (270W, + 23) on the terminator side. If you pay attention to the color image, you can see the situation faintly. A pale white cloud is beginning to appear near Antarctica. This is a normal change as NPCs are getting smaller. The area around Eridania (200 ~ 230W, -35 ~ -55) looks reddish, and it seems that the area is sunny.
