

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2021年12月22日

今日は2人の観測がありました。初めての画像の報告も含まれています。肉眼では観測条件が悪く、南半球が暗いことしかわかりませんでした。Raimondo Sedraniの画像はIRで撮られたものです。Aurorae SinusやMare Acidariumの暗部がよく出ています。通常の大きな模様は前シーズンと変わらないことが分かりました。IRは観測初期の火星面の状態を知るうえで、とても役に立ちます。

(by 2 observations; reported by Makoto Adachi)

2021, Dec. 22

There were two observations today. It also includes a report of the first image. The observation conditions were bad with the naked eye, and I could only see that the Southern Hemisphere was dark. The image of Raimondo Sedrani was taken by IR. The dark areas of Aurorae Sinus and Mare Acidarium are often seen. It turned out that the usual big pattern is the same as the previous season. IR is very useful for knowing the state of the Martian surface at the beginning of observation.
