

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

井上の画像は、リムに近くなるほど明るくなり、ダスティーな状態にあることが分かる。南北両半球ともに同じ傾向にある。安達も肉眼で観測したが、赤みは薄く、晴れたときの地表の色は観測できなかった。

Inoue's image becomes brighter as it gets closer to the limb, indicating that it is in a dusty state. Both the north and south hemispheres have the same tendency. Adachi also observed it with the naked eye, but the redness was faint and the color of the earth's surface when it was sunny could not be observed.

(by 7 observations; reported by Makoto Adachi)
