Images of Gary Walker and Mike Hood recorded a white cloud over Argyre (30W,-50). A white band near Edom (360W,2) on Aug. 3. Two observers have sent reports, but there is no record of either. The observation position is closer to the rim than yesterday, and it would be fine if it was visible in the morning mist, but it was not visible today. No change was observed near Solis Lacus (W90;-28).
