

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2023 年 2 月 19 日 (2023, Feb. 19)

日本は天気が悪く、観測はなかった。北極冠の周囲に、極冠からのダストの吹き出しによる明るい部分が見えるところがある。Alba (115W.+45)の位置から東の方はその傾向がよく見え、ここしばらくの間、この傾向が続いている。Clyde Foster の画像は Tharsis (80W~120W,+10)の広い範囲に白雲の広がっている様子を記録している。Ls40° 付近以降赤道帯霧(氷晶雲)がはっきりしてくるが、その初期の状態だと思われる。

SPH は Mare Cimmerium 南方から Mare Sirenum 南方まで、バンド状に見える。

The weather was bad in Japan, and no observations were made. There are bright areas around the npc due to dust blowing out from the polar cap. From the position of Alba (115W.+45) to the east, the trend is clearly visible, and this trend has continued for some time. Clyde Foster's image records a white cloud spread over a wide area of Tharsis (80W~120W, +10). The equatorial fog (ice cloud) becomes clear after around Ls40° , but it seems to be in its initial state.

SPH appears as a band from the south of Mare Cimmerium to the south of Mare Sirenum.
(by 6 observations; reported by Makoto Adachi)
