

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

日本の観測条件は良くなかった。Argyre (30W, -50) から Noachis (335W~10W, -25~-30) 方面がダスティーになっているように記録されている。濃い部分はなく、ベール状だ。Aurorae Sinus (53W, -10) 付近はダストベールが少ないようで、黒く記録された。井上の画像ではSPCと低緯度のリムが白っぽく記録されている。朝霧だろう。

Observation conditions in Japan were not good. It was recorded as being dusty from Argyre (30W, -50) to Noachis (335W~10W, -25~-30). There was no dense area, it was veil-like. There seemed to be little dust veil around Aurorae Sinus (53W, -10), and it was recorded as black. Inoue's image, the SPC and low-latitude rims were recorded as whitish. It must be morning mist.

(by 3 observations; reported by Makoto Adachi)
