

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2024年5月25日 (2024, May, 25)

Clyde Foster は IR の画像を報告してきた。Solis Lacus (W90;-28)が立ち上がったような姿に記録されており、面白い。井上は、今日もダストストームの東側を記録している。Sinus Sabaeus (320W~350W,-10)付近は、前日と変わらないが、Noachis (335W~10W,-25~-30)と Hellas (275~315W,-30~60)がつながったような姿になっているのが興味深い。阿久津や筆者も Sinus Sabaeus (320W~350W,-10) 付近を観測したが、いつもよりも薄い姿に記録している。形は見えるものの、濃さは淡く見えた。もともと薄いダストストームだったのか、淡く衰退してきたのかはわからない。

Clyde Foster reported IR images. It is interesting that Solis Lacus (W90;-28) appears to be rising. Inoue recorded the eastern side of the dust storm again today. The area around Sinus Sabaeus (320W~350W,-10) is the same as the previous day, but it is interesting that Noachis (335W~10W,-25~-30) and Hellas (275~315W,-30~60) appear to be connected. Akutsu and the author also observed the area around Sinus Sabaeus (320W~350W,-10), and recorded that it was fainter than usual. Although the shape was visible, the intensity seemed faint. It is unclear whether it was originally a faint dust storm or if it has been fading away.

(by 4 observations; reported by Makoto Adachi)
