

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2024 年 11 月 26 日 (2024, Nov. 26)

久しぶりに Tharsis (80W~120W,+10)付近の観測が Clyde Foster から送られてきた。Tharsis (80W~120W,+10)の地形的な雲がいくつも記録されている。Arsia Silva Mons (W120,-3)は午後3時ごろにはすでに白雲がはっきり見えている。Eric Sussenbach は Clyde Foster よりも後の観測で、Olympus Mons (135W,+25)にも淡い山岳雲が記録されている。阿久津の画像は Cydonia (W340-5, +53)からその北部が記録されている。状態に変化ない。

Clyde Foster has sent us his observations of the vicinity of Tharsis (80W~120W,+10) for the first time in a while. Several orographic clouds are recorded for Tharsis (80W~120W,+10). White clouds are already clearly visible at Arsia Silva Mons (W120,-3) around 3pm. Eric Sussenbach's observations, made later than Clyde Foster's, also recorded faint orographic clouds at Olympus Mons (135W,+25). Akutsu's images record Cydonia (W340-5, +53) and its northern part. No change in condition.

(by 3 observations; reported by Makoto Adachi)
