Aurorae Sinus (53W,-10) is visible in Japan. Solis Lacus (W90;-28) is recorded as dark, and Tithonius Lacus (80W~90W,-0) looks black on the east side. Xanthe (W53,+15) to Nilkeras (50W,+30) are affected by white clouds and are unclear. In color images, they appear whitish, but Nilkeras (50W,+30) would appear darker than the image when observed with the naked eye. NPC is observed as yellowish.
