Clyde Foster の観測は NPC のターミネーター側に、小さくまとまった白雲を記録している。白雲の表現を控え目に行っているため、白雲の濃い部分の位置と広がりがはっきりした。今シーズンは Pavonis Mons (120W,+3)の西側にいつも濃い部分が見える。肉眼でもこの部分は良く見えていた。南半球のリムは白雲が目立っている。

Clyde Foster's observations recorded small, concentrated white clouds on the terminator side of the NPC. Because the white clouds were displayed sparingly, the location and extent of the dense parts of the white clouds became clear. This season, a dense part was always visible to the west of Pavonis Mons (120W, +3). This part was clearly visible even with the naked eye. The limb in the southern hemisphere was marked by white clouds.

(by 1 observation; reported by Makoto Adachi)
