

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2022年2月24日

前日と同じように、南半球が晴れている様子が記録されている。前日顕著だった Ophir (65W,-7) ・ Candor (75W, +10) 付近の白雲は今日もよく見える。北極付近の雲の様子が、非常に良く記録されている。スポット状にしかも黄色っぽく、かなり活動的な風の流れになっているようだ。Eric Sussenbach は Mare Cimmerium (W180~W250,-40~0)付近を観測した。画像の処理過程で明るいバンドができてしまったが、よく見ると Syrtis Major の東方が明るくなっている様子が分かる。

2022, Feb. 24

As with the previous day, it is recorded that the southern hemisphere is sunny. The white clouds near Ophir (65W, -7) and Candor (75W, +10), which were prominent the day before, can be seen well today. The appearance of clouds near the North Pole is very well recorded. It is spot-like and yellowish, and it seems that the wind is quite active. Eric Sussenbach observed around Mare Cimmerium (W180 ~ W250, -40 ~ 0). A bright band was created during the image processing process, but if you look closely, you can see that the eastern part of Syrtis Major is brightening.
