

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2022 年 2 月 28 日

前日の 27 日に Argyre (30W,-50) の南方が黄色っぽく見えていたが、今日は少し濃くなって見える。本当に濃くなったのかどうかははっきりしない。明るい位置は測定すると Argyre (30W,-50) の位置である。色がやや白く、B 画像でもやや明るいため、盆地にできたダスト混じりの白雲のように見える。SPC の縁に光点が見えるが、これは、この時期決まって見える地形性のものである。

(by 1 observation; reported by Makoto Adachi)

2022、Feb. 28

The south of Argyre (30W, -50) looked yellowish on the 27th of the previous day, but it looks a little darker today. It's not clear if it really got darker. The bright position is the position of Argyre (30W, -50) when measured. The color is a little white, and the B image is a little bright, so it looks like a white cloud mixed with dust in the basin. A light spot can be seen on the edge of the SPC, which is a topographical feature that can be seen at this time.
