

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2022 年 8 月 3 日 (2022, Aug. 03)

今日は、広い地域の観測が集まった。Syrtis Major 付近は、北半球がダスティーである。John Sussenbach の画像は Edom (360W,2) 付近に白いバンドを記録している。白雲だとすると、細くシャープで珍しい。今後の見え方に注目したい。Aurorae Sinus (53W,-10)や Mare Sirenum (140W~170W,-30)付近の見え方に変化は見られない。

Observations from a wide area were collected today. Near Syrtis Major, the northern hemisphere is dusty. John Sussenbach's image records a white band near his Edom (360W, 2). If it is a white cloud, it is thin, sharp and unusual. I would like to pay attention to how it looks in the future. Aurorae Sinus (53W,-10) and Mare Sirenum (140W~170W,-30) show no change in appearance.

(by 4 observations; reported by Makoto Adachi)
