

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

この画像は、Phasis (140W, -35) と Araxes (125W, -26) 付近が暗く記録されている。北半球の淡い模様よりも若干暗く見えるが、強めのコントラストの影響だと思われる。これらは、実際にはかなり淡い模様だ。SPC の中央に極冠の輝点が見えるが、これも通常の見え方である。筆者は、眼視観測を行ったが、観測条件は極めて悪く、成果はなかった。

In this image, the areas around Phasis (140W, -35) and Araxes (125W, -26) are recorded as dark. It appears slightly darker than the pale pattern in the northern hemisphere, but this is probably due to the strong contrast. These actually look quite pale. A bright spot of the polar cap can be seen at the center of the SPC, which is also the normal appearance. The author conducted visual observations, but the observation conditions were extremely poor and no results were obtained.

(by 2 observations; reported by Makoto Adachi)
