

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

Clyde Foster の画像では Pandorae Fretum (330W-10W, -23)から Meridian (0W,-5)が異形を呈している。暗色模様の濃さが濃くなっているため、模様の様子が分かりにくくなっているが、Deucalionis Regio (330W~10W,15)中央付近がかなり暗くなっていて驚いた。Meridianは西側の爪のような部分の先端が見えなくなっている。東粟野つめは、根元が見えなくなっている。Noachis (335W~10W,-25~-30)西部からの北に向かって、ダストが流れ込み、一部は Iani Fre. (15W, -6)を通り過ぎてさらに北に少し進んでいるように見える。あまりに強烈な変化で、驚いた。

In the Clyde Foster image, Pandorea Fretum (330W-10W, -23) to Meridian (0W,-5) are showing strange shapes. The dark markings are getting darker, making it difficult to see the pattern, but I was surprised to see that the center of Deucalionis Regio (330W~10W,15) was quite dark. The tip of the claw-like part on the western side of Meridian is no longer visible. The base of Higashi Awano Claw is no longer visible. Dust is flowing in from the western part of Noachis (335W~10W,-25~-30) toward the north, and some of it seems to have passed Iani Fre. (15W, -6) and moved a little further north. The change was so drastic that I was surprised.

(by 1 observation; reported by Makoto Adachi)
