森田の観測条件は良くなかったが、肉眼で見たときのイメージに近い。Tharsis (80W~120W,+10)が白っぽく記録されている。日本は最近、シーイングに恵まれていない。NPC に記録は難しくなってきた。Rudolf A. Hillebrecht の観測では NPC 付近が広く淡い白雲に覆われている様子を記録している。

Morita's observation conditions were not good, but the image is close to what one would see with the naked eye. Tharsis (80W~120W, +10) is recorded as whitish. Japan has not been blessed with good seeing conditions recently. It has become difficult to record NPC. Rudolf A. Hillebrecht's observations show that the NPC is widely covered with pale white clouds.

(by 3 observations; reported by Makoto Adachi)
