

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2025 年 5 月 24 日 (2025, May, 24)

前日の 5 月 23 日は欠測となり、今日の報告は一人だけになった。Clyde Foster は Tharsis (80W~120W,+10)の火山と Olympus Mons (135W,+25)を暗い斑点状に記録して、同じ状態が続いていることを確認した。G や B で明るい地域は、ここしばらくの間、同じところで明るく記録されている。位置が変化しないことから地形性の雲だと言えるだろう。

The previous day, May 23rd, was a missed observation, and only one person reported today. Clyde Foster recorded the volcano Tharsis (80W~120W,+10) and Olympus Mons (135W,+25) as dark spots, and confirmed that the same condition continues. The bright areas in G and B have been recorded brightly in the same place for some time. Since the position does not change, it can be said that they are orographic clouds.

(by 1 observation; reported by Makoto Adachi)
