

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2025 年 8 月 31 日 (2025, Aug. 31)

伊藤の観測は、同じ位置での観測だった。並べて見たが、変化は見られなかった。Mark Lonsdale の観測は、日本からの観測と同経度の為、同じ地域の観測である。NPC は雲に覆われていて、はっきりとは見えていない。Tharsis (80W~120W,+10)付近の白雲の姿は見えなくなっている。

Itou's observations were made from the same location. Comparing his data with others, no significant changes were observed. Mark Lonsdale's observations were also from the same longitude as those from Japan, meaning they covered the same region. The North Polar Cap (NPC) was obscured by clouds and not clearly visible. The white clouds near Tharsis (80W-120W, +10) were no longer visible.

(by 2 observations; reported by Makoto Adachi)
