

Black letters are mainly descriptions of patterns.

Blue letters are descriptions of polar caps and clouds.

Brown letters are the description about dust.

Red is a special note.

2025 年 9 月 2 日 (2025, Sep. 02)

Clyde Foster は I R の画像を報告してきた。非常に大きくよく写っており、驚いた。前日、Propontis (W180,+45)の北側に見られた明部は見られない。9月1日の画像と比較しても、今日は見えなくなったと言っていいだろう。I R画像の報告だけでははっきりしない。とはいえ、撮影する方は大変な努力をされている。Olympus Mons (135W,+25)は白っぽく記録され、地肌が記録されたようだ。

Clyde Foster has sent in some infrared images. I was surprised by how large and clear they were. The bright area that was visible north of Propontis (W180, +45) yesterday is no longer visible. Compared to the image from September 1st, we can say that it has disappeared. However, it's difficult to draw definitive conclusions based solely on infrared images. Nevertheless, those who take these images are clearly making a great effort. Olympus Mons (135W, +25) appears whitish in the image, suggesting that the surface features are being captured.
