今日は Clyde Foster からの IR 観測だけだった。NPC の周囲以外の暗色模様は通常の見え方をしており、変化はない。北半球高緯度は NPC 付近がダストストームの影響を受けて、明るくなっている。模様の変化を追跡できないため、詳しくは分からない。残念だ。

Today we only received IR observations from Clyde Foster. The dark patterns around NPC appear normal and have not changed. The area around NPC in the high latitudes of the Northern Hemisphere is brighter due to the effects of a dust storm. We can't track the changes in the pattern in detail, which is unfortunate.
